Chapter 2 - Discrete Time Signals and Systems

- The complex signal $e^{jn\omega}$ is an important signal in discrete time signal processing – it is an eigenfunction of a linear system and it leads us to the concept of Fourier Transform of a discrete-time signal Again let us use $T[\cdot]$ to represent the operation a discrete time system performs on its input

continuous-time and discrete-time subsystems { for example, digital controllers and actuators interacting with physical processes and infrastructure
We will not delve into such hybrid systems in this course, but will instead focus on systems that are entirely either in the continuous-time or discrete-time domain
